

The Gabby Tailored-Deep Seating Collection features custom designed upholstery pieces that have been crafted with the finest materials and are made in the USA. The Tailored Deep-Seating collection brings you transitional designs that can be customized to reflect your home's aesthetic. Choose from any of our stocked fabrics or Special Order your own fabric. Create your own custom look by combining your choice of fabric with any of our 4 leg finishes and 5 nail head finishes.

## TAILORED- DEEP SEATING CONSTRUCTION

### ▶ **FRAME**

Tailored Frames are made from select hardwoods and engineered hardwood laminates. Frames use mortise and tenon joinery for strength and screwed together, when necessary. All stress joints are glued and corner blocked. Front legs are also removable to aide in installation, allowing the frame to fit through doorways.

### ▶ **SPRINGS**

Tailored pieces are constructed with heavy gage sinuous wire springs that provide seating comfort, superior suspension and durability. Webbed seat bases are used where sinuous wire springs are not able to be used.

### ▶ **BACK CUSHIONS**

Semi-attached and loose pillow backs are filled with high resiliency fiber. Fiber is encased in a non-woven ticking. The backs are channeled to maintain shape and long lasting durability.

*Throw pillows are filled with a 90/10 blend of down and fiber and are encased in a 250 cotton count, down proof ticking.*

### ▶ **SEAT CUSHIONS**

*Where applicable, customers can select one of the following seat cushions for their Tailored piece:*

**BLEND DOWN STANDARD CUSHION-** A hand-crafted cushion that uses a 1.8 or better high density foam core that is wrapped with a blend of super soft high resiliency fiber and North American water fowl feathers. The cushion is then sewn into a down proof ticking to prevent migration of the feathers through the fabric. This cushion is engineered to have the luxurious feel of down, an inviting seat and long lasting durability.

**SPRING DOWN CUSHION-** Our best step-up featuring a hand-crafted cushion, using a 1.8, or better, high density resiliency foam core that contains 14 gauge spring coils inside, then wrapped in a blend of soft, high resilient fiber and 90% goose and 10% white goose down feathers. This option is available for an up charge.

**ULTRA PLUSH CUSHION-** A hand-crafted cushion that uses a 1.8 or better high density foam core that is wrapped with a super soft high resilient fiber. The cushion is then sewn into a non-woven ticking. This cushion is engineered to have a firmer seat than the Blend Down standard cushion, and does not have any feathers for those with Allergy concerns. This option is available for an up charge.

**NOTE:** Zippers are used on throw pillows, back and seat cushions. The zippers are a function of manufacturing and not for the purpose of removing for cleaning.

All foam used is soy based for a smaller environmental footprint.
